

Update on Satellite Observations

Roger Saunders and Chris Velden

- Current Status
- Future Geostationary
- Future Polar
- Impact of Satellites in NWP (Met Office)

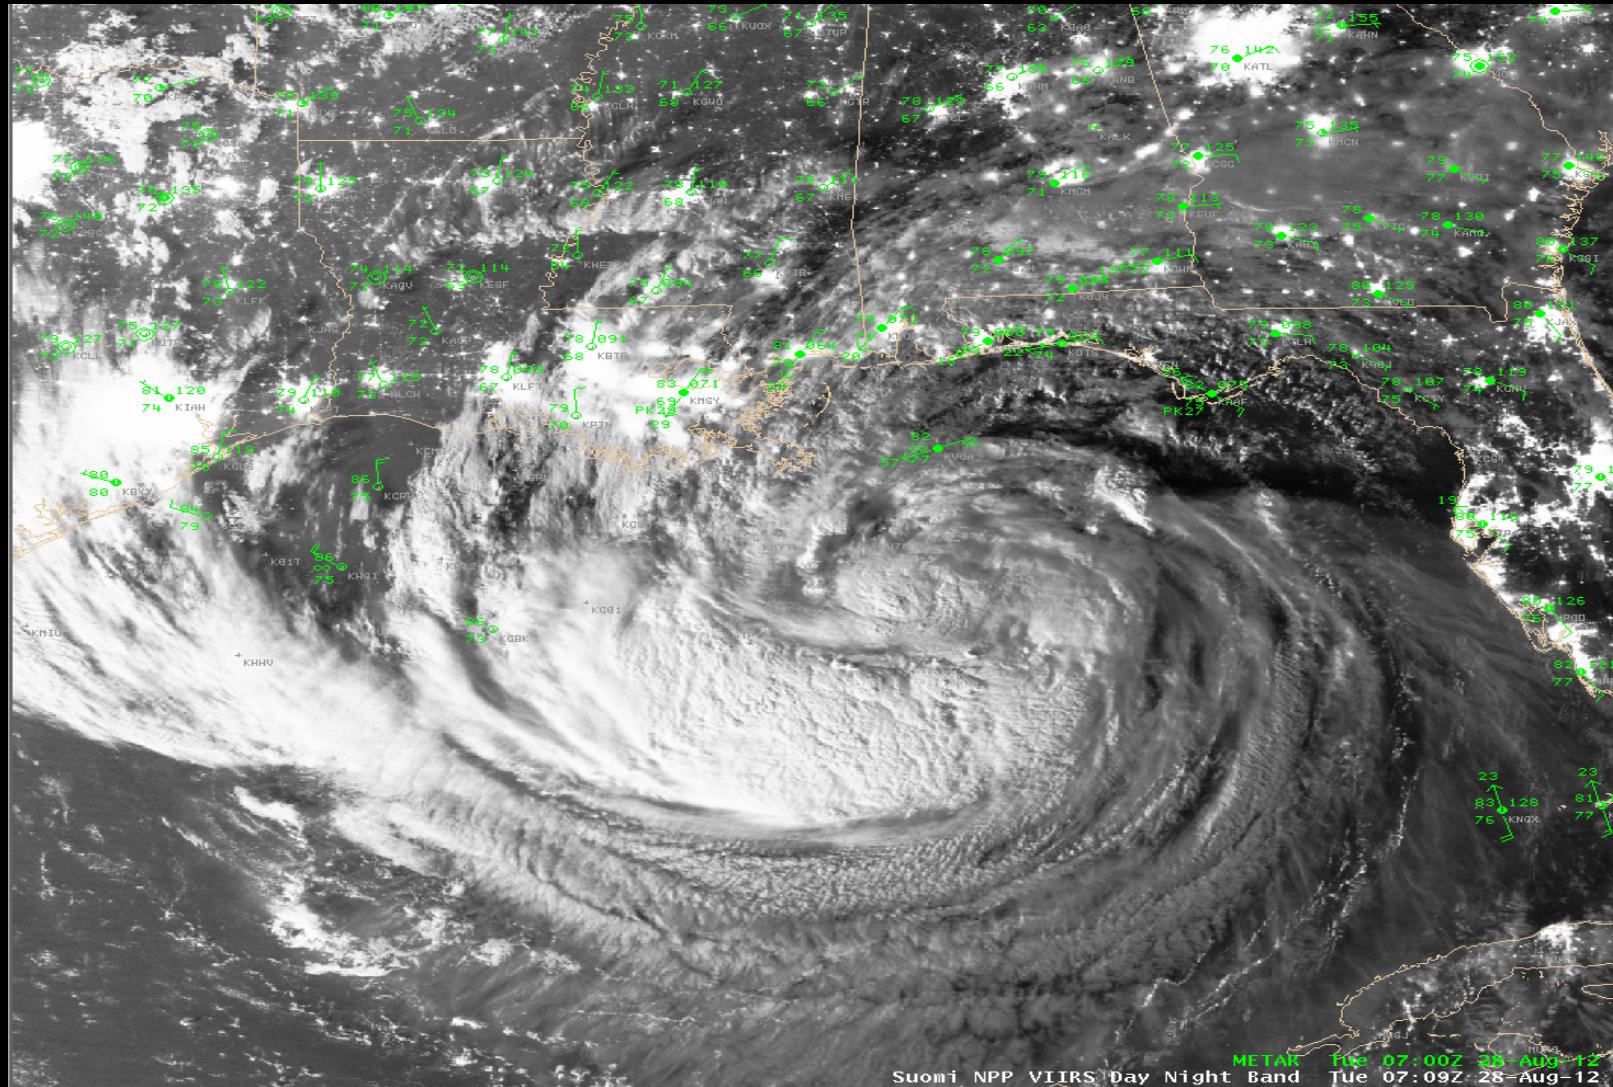

Current Status

- Operational geostationary satellites–
[USA](#): GOES-13 (East), -15 (West), -12 (S. America);
[EUMETSAT](#): METEOSAT-9 (0 Deg.) & -7(Indian Ocean);
[India/ISRO](#): Kalpana & INSAT-3A
[CMA](#):FY-2E & F; [KMA](#):COMS; [Russia](#):GOMS-2; [JMA](#):MTSAT-2
- METEOSAT-10 successfully launched (will replace -9 on 14 Jan 2013; -9 will become rapid-scan; -8 will become backup)
- ISRO OceanSat-2 scatterometer now “operational”
- ISRO/CNES Megha Tropiques launched October 2011 (expect distributed data in early 2013)
- Suomi-NPP launched October 2011 (ATMS, CrIS, VIIRS, OMPS)
- Japanese GCOM-W1 launched May 2012 (AMSR-2)
- METOP-B launched Monday! (more ASCAT coverage+dual AMVs)
- Loss of ENVISAT in April 2012 (AATSR, Schiamachy, MERIS)
- [McMurdo DB is online reducing data delays by 50%](#)

SUOMI -NPP: Current Status

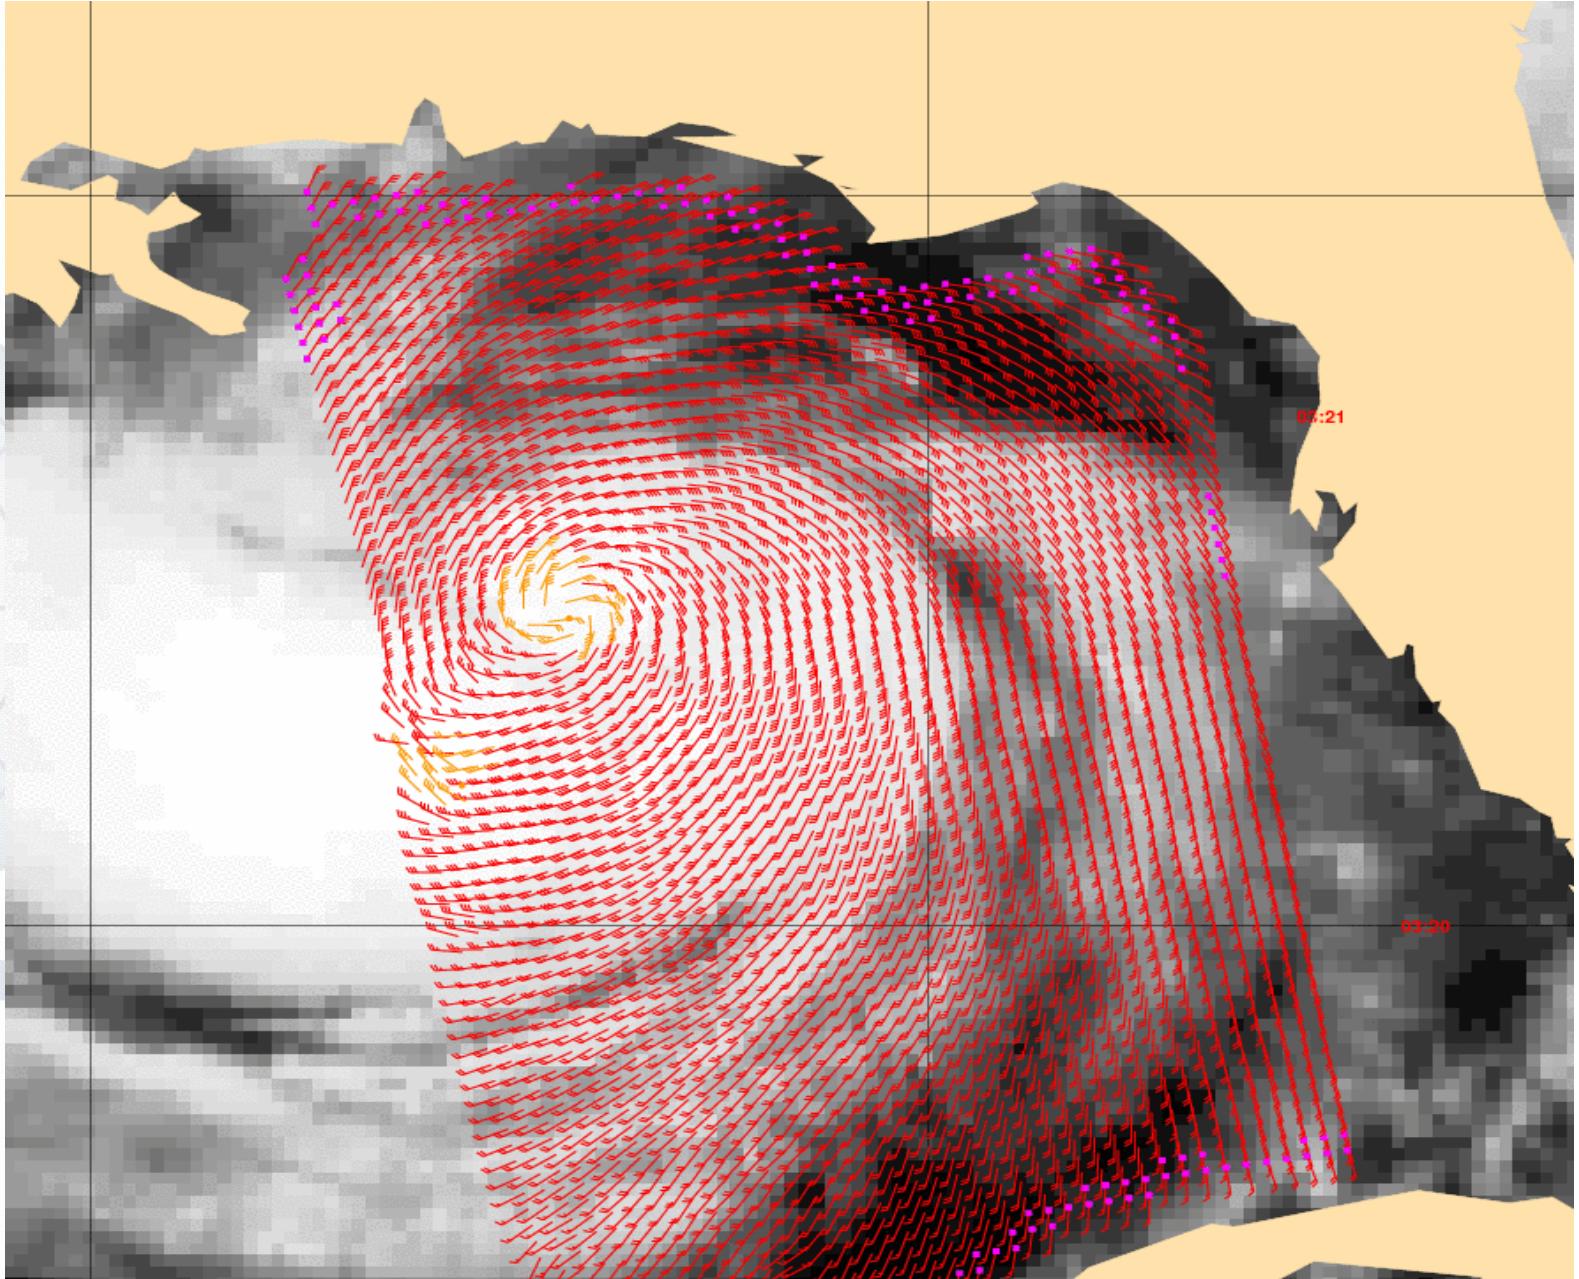

- "Operational" is a matter of interpretation. However, "provisional" might be what most would call the current status of the observations.
 - VIIRS SDRs (sensor data records) are "beta" now and will be "provisional" soon. The VIIRS SDRs are now available to the public through NCDC's CLASS system. Many VIIRS EDRs (products) are in beta, but others won't be beta until the first half of 2013.
 - CrIS SDRs will be provisional soon; CrIS EDRs are scheduled to be provisional in December.
 - OMPS is a mixed bag. See the link below.
 - ATMS data looks good.
-
- NPP updates and details:

Proposed EPS-SG satellites and sensors

SATELLITE A

- IRS / IASI-NG
- MWS
- VII / METimage
- UVNS / Sentinel-5
- 3MI
- RO

SATELLITE B

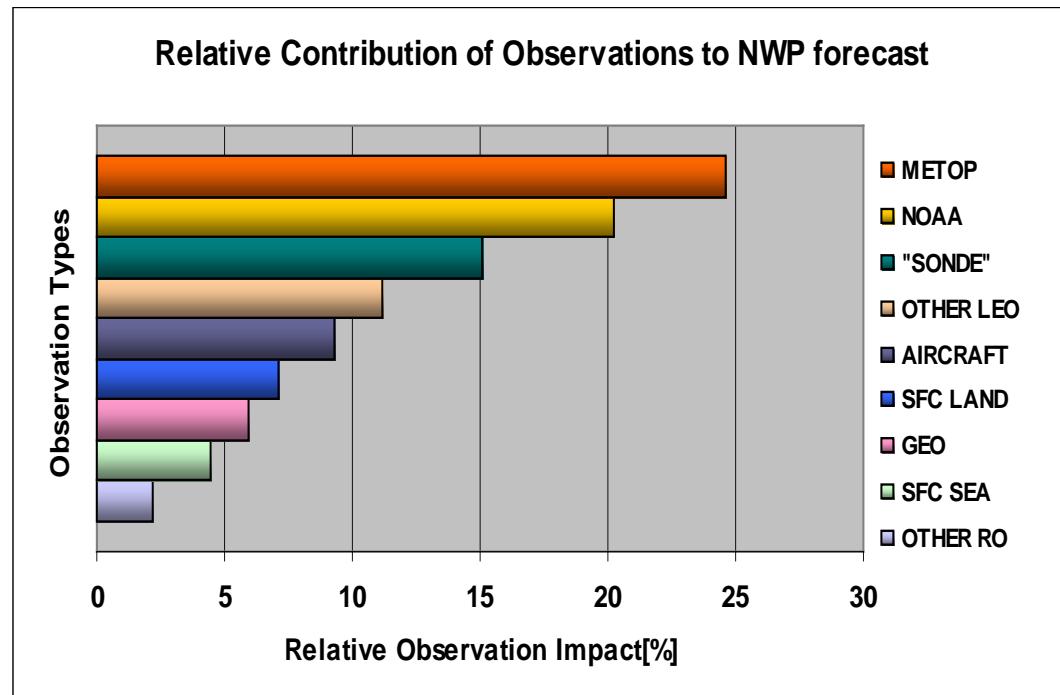

- SCAT
- MWI
- ICI
- RO

Met Office

Observation Impacts in Met Office global NWP

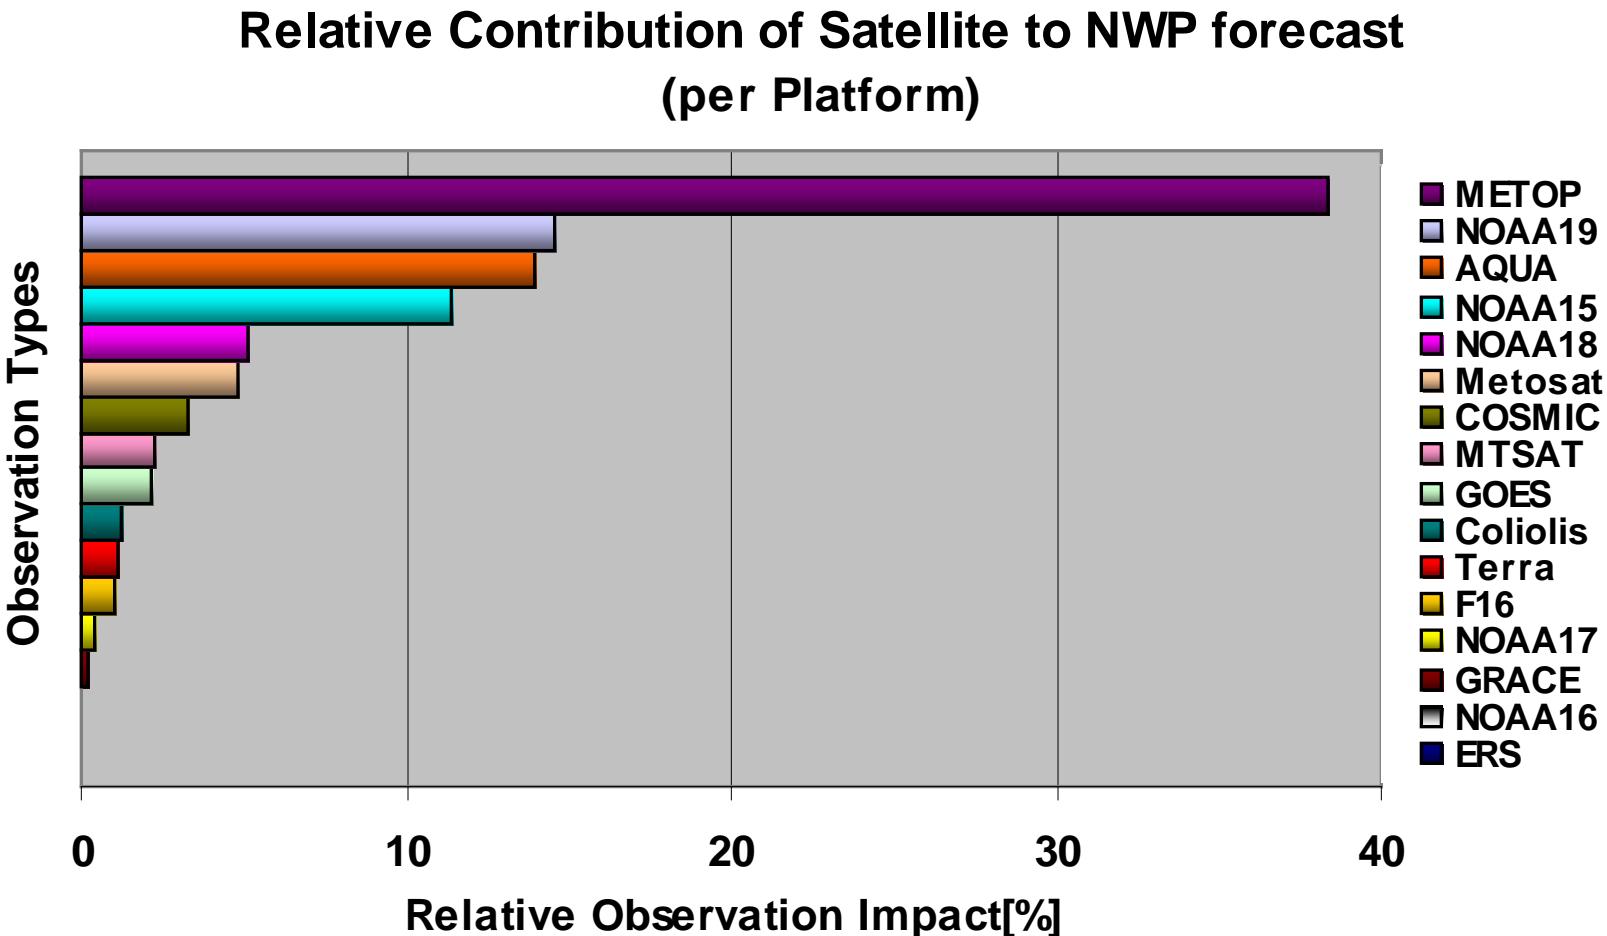

Metop:	AMSU-A, MHS, HIRS, IASI, ASCAT, GRAS
NOAA:	AMSU-A: N-15, N-18, N-19 MHS: N-18 HIRS: N-17, N-19 AVHRR AMVs: N-15, N-16, N-17, N-18, N-19
Other LEO:	EOS-Aqua AIRS, MODIS AMVs EOS-Terra MODIS AMVs DMSP F-16 SSMIS ERS-2 AMI; Coriolis WINDSAT
GEO:	GOES AMVs; MTSAT AMVs; Meteosat AMVs, CLRs
Other RO:	CHAMP, GRACE
Aircraft:	AMDAR, AIREP
“SONDE”:	PILOT, TEMP, Wind profiler, DROPSONDE
Surface land:	SYNOP, BOGUS
Surface sea:	BUOY, SHIP, TCBOGUS

Met Office

Satellite observation impact per platform

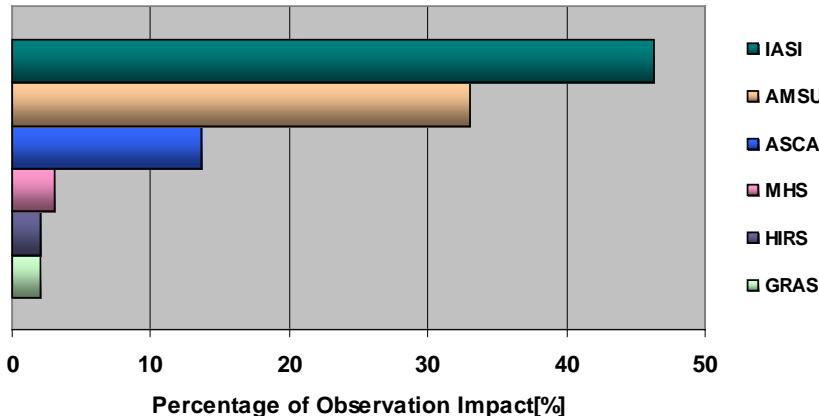

Observation impact per Metop sensor

a)

Percentage Contribution of Satellite Impacts
(per MetOp)

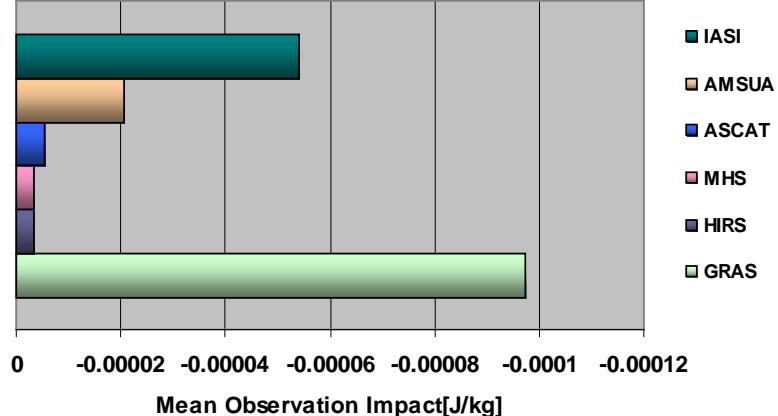

Observation Types

b)

Mean Satellite Impacts on NWP Forecast
(per MetOp/per sounding)

Observation Types

- AMSU-A: Microwave sounder - temperature
MHS: Microwave sounder - humidity
HIRS: Infra-red sounder – temperature and humidity
IASI: Hyperspectral infra-red sounder – temperature and humidity
ASCAT: Scatterometer – sea surface wind
GRAS: Radio occultation sounder – temperature and humidity

Future Geostationary Satellites

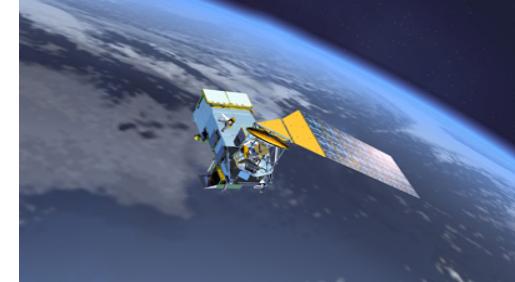

- **EUMETSAT Meteosat Third Generation Imager and Sounder**
 - Launch in 2016/18, six satellites in series, 3 axis stabilised
 - High spectral IR Sounder 700-1210 and 1600-2175cm⁻¹
 - 16 channel VIS+IR Imager (10min scan, 2km fov)
 - Lightning Imager
 - UVNS Sounder for atmospheric chemistry (Sentinel-4)
- **NESDIS GOES-R Series**
 - -R launch in 2015, -S launch in 2017
 - Advanced Imager
 - Lightning Mapper
 - Space Weather instrument suite
 - <http://www.goes-r.gov/> for more details
- **CMA FY-4 series** (IR Sounder, MW Sounder): 2015-2020 launches
- **KMA COMS-Next** for geostationary environmental monitoring
- **ISRO INSAT-3D** to be launched in 2013
- **GeoMetWatch** – Commercial entity, proposed for 2015-2020
 - Advanced Hyperspectral Sounder

Future Polar Satellites

- ESA: ADM delay to 2015? due to laser reliability
- JPSS: JPSS-1 ~2017 launch in PM orbit followed by JPSS-2
- GPM: 2014 for precipitation, to replace TRMM
- COSMIC-2 GPS-RO
- Canada: PCW?
- USA/DoD: DWSS to replace DMSP?
- EPS-Second Generation to be defined (earlier slide)
- ISRO: SARAL (altimeter) scheduled for launch Dec 2012
- CMA: FY-3C (2013), FY-3D (2015), FY-3E (2017), FY-3F (2019)
- JMA: GCOM-W2, GCOM-C
- Iridium?

Messages for THORPEX

- Research satellites/instruments can be valuable as operational data providers, but can fail suddenly without backups (e.g. ENVISAT, AMSR-E are recent examples)
- Satellite data contributions to the GOS by nations increasing (e.g. FY-3, Oceansat-2), to hopefully help fill future gaps
- Contribution of satellite data to the GOS is dominant in many advanced DA systems
- Assimilation of full-resolution satellite data in convective scale models is challenging, but progressing
- Research underway to extend/improve use of advanced IR sounders (cloudy rads, use PCs, more data over land etc.)
