ABSTRACT

On 12 October 1998, it was the 25th anniversary of the Man computer Interactive Data Access System (McIDAS). On that date in 1973, McIDAS was first used operationally by scientists as a tool for data analysis. Over the last 25 years, McIDAS has undergone numerous architectural changes in an effort to keep pace with changing technology. In its early years, significant technological breakthroughs were required to achieve the functionality needed by atmospheric scientists. Today McIDAS is challenged by new Internet-based approaches to data access and data display. The history and impact of McIDAS, along with some of the lessons learned, are presented here.

1. Introduction

The Man computer Interactive Data Access System (McIDAS) has had a substantial influence on the computerization of the atmospheric sciences. McIDAS made its first major impact analyzing cloud drift winds derived from time sequences of geostationary satellite images. In its early years, McIDAS was used to produce television broadcasts and was the unparalleled forerunner of the television weather graphics industry of today. In 1977, McIDAS provided a major impetus to the computerization of the college classroom following the National Science Foundation (NSF)-sponsored Interactive Video Displays for Atmospheric

The McIDAS systems installed at the National Meteorological Center [NMC, now the National Centers for Environmental Prediction (NCEP)], National Severe Storms Forecast Center [NSSFC, now the Storm Prediction Center (SPC)], and the National Hurricane Center [NHC, now the Tropical Prediction Center (TPC)] were used to help define the technical requirements for the Advanced Weather Information Processing System (AWIPS). AWIPS is one leg of the NWS Modernization Program, which, in addition to AWIPS, includes the new Doppler Weather Surveillance Radar, the Automated Surface Observing System, a new generation of Geostationary Operational Environmental Satellites, and the National Center for

The AMRC...er...AMRDC

- The Antarctic Meteorological Research Center
 - "Marriage" between the McIDAS Project and Automatic Weather Station project
 - Established in 1992 – at a MUG meeting!!
 - Centered around satellite composite work, real-time weather displays, and data archival for Antarctica
 - Satellite data ingest was also sort of included...
- Today we are called the Antarctic Meteorological Research and Data Center or AMRDC
 - Check out our commands/servers in XRD and servers in McIDAS-X! 😊
 - AWSMG, NOAA Level 1b ADDE server, etc.

AMRDC Repository

- Based on CKAN
 - Open Source (Comprehensive Knowledge Archive Network)
- Easy access
- Search/Advanced Search
- Clickable Map
- Keywords
- Digital Object Identifiers (DOI)
- Follows 'FAIR' conventions
 - Findable, Accessible, Interoperable, and Reusable
- Now available!
 - **Please make use of it!!**
 - Feedback welcome!
 - *Data being added all the time*

<https://amrdcdata.ssec.wisc.edu>

The screenshot shows the AMRDC Data Repository website. At the top, there is a navigation bar with the AMRDC logo and the text "AMRDC Data Repository". To the right of the logo are links for "Browse Datasets", "About Us", "Deposit Policies", and "Partners". Below the navigation bar is a large banner image of an Antarctic research station on a snowy landscape. Overlaid on the banner is a search bar with the placeholder text "Search Antarctic data..." and a magnifying glass icon. Below the search bar are several filter buttons: "Advanced Search", "Temperature", "Wind", "Barometric pressure", and "Humidity".

Below the banner is a section titled "AMRDC Repository interactive data map". On the left, there is a text box with the heading "About the AMRDC Repository". The text describes the AMRDC and Automatic Weather Station (AWS) programs as sister projects of the United States Antarctic Program (USAP), focusing on observational Antarctic meteorological research. It mentions that the repository provides archival, preservation, access, and metadata authoring services for Antarctic meteorological data. The text also states that the repository hosts data collected by the Antarctic Meteorological Research Center and Automatic Weather Station projects, as well as campaign meteorological datasets deposited by other Antarctic investigators. At the bottom of the text box, it says "Learn more at <http://amrdc.ssec.wisc.edu>".

On the right side of the map section is an interactive map of Antarctica. The map shows various research stations and automatic weather stations marked with red dots. A legend in the top right corner of the map indicates: "Research Stations" (blue dot), "Automatic Weather Stations" (red dot), "Satellites" (red square), and "Antarctic base map" (blue square). Specific stations labeled on the map include Palmer, Princess, South Pole, and McMurdo. The map is titled "AMRDC Repository interactive data map" and includes a zoom control on the left side. At the bottom right of the map, it says "qgis2web · OpenLayers · QGIS".

Below the map section, there are two sections: "Recently Added Datasets" and "Featured Collection". The "Recently Added Datasets" section shows the AMRDC logo and the text "AMRDC Antarctic Meteorological Research and Data Center". The "Featured Collection" section shows a thumbnail for "Amundsen-Scott South Pole Station datasets" and a "Screenshot" button.

Antarctic Satellite Composite Imagery

- This project *formal* operational support for these composites after 30+ years of generation!!
- Improve by including more satellites into the composite
- Providing a “standard grid-north-up” product
- Continue to make hourly composites available in 5 spectral channels.

MATC McIDAS Usage

- Educational
 - Course support:
 - Weather and Climate
 - Weather and Climate Lab
 - Climate and Climate Change (less so)
 - Aviation Weather (coming spring 2024!)
 - Independent study
 - Honors meteorology
 - Other applications:
 - Astronomy observing support
 - Hall weather display/monitor
 - Research activities

Educational Experiences with Data!

- ...its more than just pretty pictures!

Comments on McIDAS-X on MacOS at MATC...

- We are a Mac shop (for our department)
- Always on the bleeding edge of new versions of MacOS
- Routine hardware “refresh” for systems
 - (on the order of 3 to 4 years or less)
- Currently on Mac’s with M2 chips system
- No utility ‘mcidas’ account due to MATC security rules
 - Installed in /User/Shared/mcidas
- JAMF management environment at MATC for Mac systems
 - “Push” or deploy software (or using a “self-service” system)

How'd we do it that? (the Reader's Digest version)

- JAMF - Install of CMAKE, Xquartz
- Script to trick softwareupdate to update and install Command Line Tools
- Homebrew—
 - Script found to install as root (and bypass issues with that)
 - Older version for i386 – works for Arm Architecture
 - Install in incorrect directories issues?
 - use the arch -x86_64 (Thanks Dave Paker!) command to force brew to install the dependencies as i386 and not care about the arm part
 - arch -x86_64 brew install gcc@11
- All of this has been placed into a PKG
 - Use of preinstall and postinstall script
- A few steps not mentioned here – including dealing with dependencies...
- Built mcidas in /User/Shared (make and install) and then build is zip'ed

How'd we do it that? (the Reader's Digest version – Part II)

- Bottomline – it actually seems to work!
 - Just need the PKG, internet and an account named administrator
 - Only tested with Apple Silicon Macs
- Be careful trying this at home!
- (Apply all standard warnings and disclaimers here)
- ...and let me know if you have questions
- (I can route them to the folks who did the work)

Two Cases of McIDAS

- AMRDC
- MATC

Thank you!! Questions?

- Thanks to MUG and fellow MUG members over the years!
- Thanks to Rick Kohrs and SSEC Satellite Data Services
- Thanks to the MUG Help Desk
- Thanks to Unidata
- Thanks to MATC (Physical Sciences) and SSEC (AMRDC)!
- Thank you to the MUG membership!
- Thanks to NSF: Grants 1924730, 1951720, 1951603, and 2301362
