SDI GRB Appliance

The University of Wisconsin-Madison Space Science and Engineering Center (SSEC) is pleased to announce the availability of the SDI GRB Appliance. The SDI appliance is a complete solution for processing GOES-R Series satellite data from the GRB data stream into mission-compliant netCDF files available via your network. The SDI appliance combines CSPP Geo software with RabbitMQ, SFTP and ADDE technologies to provide a hands-off network appliance solution for acquiring and serving GOES-R Series data.

CSPP Geo GRB software converts GOES-R Series data from the GRB data stream into mission compliant netCDF files
- 16-channel Advanced Baseline Imager (ABI) Level 1b
- Geostationary Lightning Mapper (GLM) Level 2+
- Space Environment In-Situ Suite (SEISS) Level 1b
- Magnetometer (MAG) Level 1b
- Solar Ultraviolet Imager (SUVI) Level 1b
- Extreme Ultraviolet and X-ray Irradiance Suite (EXIS) Level 1b

AMQP Event Notifications via RabbitMQ service
- Data availability notifications, no need to poll
- Example client-side script for UNIX systems included

SFTP / NFS file access
- GRB netCDF products available via SFTP or NFS
- Application software logs available via SFTP

McIDAS ADDE access (optional)
- 16-channel ABI Level 1b netCDF files available via ADDE
- GLM Level 2+ product available via ADDE

Additional Benefits
- System configured and operationally tested at SSEC/CIMSS
- Support for both local area and air-gapped networks
- System installation / restore accomplished with USB stick

Processing Hardware
- Software installed on standard Dell hardware
- Hardware sized to match processing requirements of software
- Storage sized to accommodate seven days of data

2021 Pricing
- Appliance options:
  - BASIC: $30,000 (includes appliance, ingest software, and 1-year technical support)
  - ADDE: $30,000 (includes BASIC items + ADDE software)
- Technical support options (fees begin one year after delivery):
  - BASIC: $2,100/year (includes system updates and ingest software updates)
  - ADDE: $5,100/year (includes BASIC items + ADDE software updates)
  [*For budget planning, we forecast the future support fees to increase by 5% each year.*]

The customer must supply input from a data stream provider like Satellite Data Services at SSEC or from an antenna system providing demodulated GRB packets via direct gigabit Ethernet connection to the SDI GRB Appliance.
