

Introduction to LIMNADES database

Adam Varley

LIMNADES (Lake Bio-optical Measurements and Matchup Data for Remote Sensing)

- *Centralise in situ bio-optical measurements from lakes and coastal waters*
- *Provide access to a large user base*
- *Standardise metadata*

Datasets

- Absorption measurements
- Derived radiometry
- Dissolved components
- Pigments
- Raw radiometry
- Salinity
- Scattering measurements
- Suspended components

Measurements over time

- *~50,000 measurements from ~ 3500 stations (unique timestamp and location)*
- *90 % are closed licence*

Chlorophyll a over time

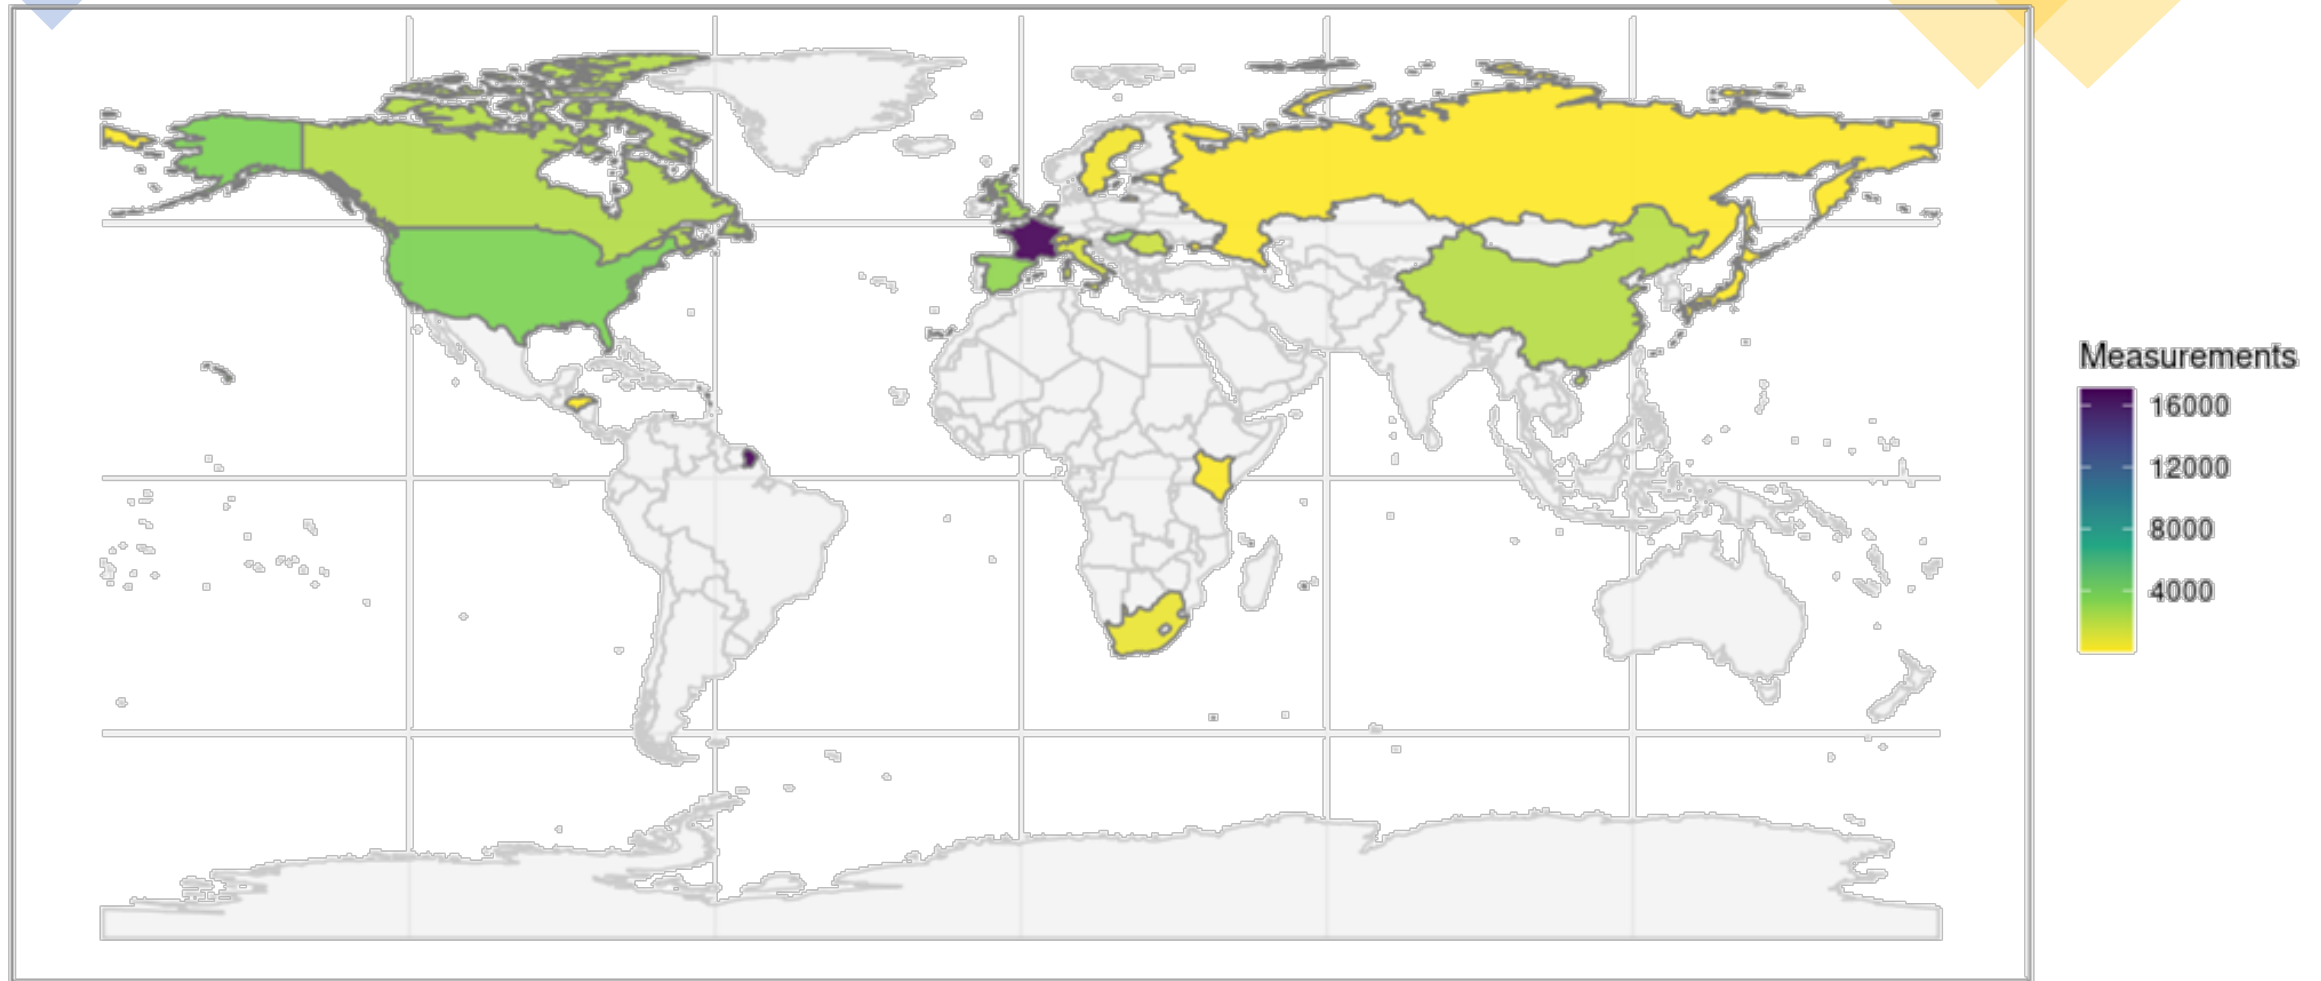

Remote Sensing Reflectance over time

- *More recent data to be added*

Measurements in space

- *~85 % of measurements in Europe and North America*

QC steps

- *Very simple QC step on coordinates and timestamps*
- *QC is left up to the data owner*
- *Next steps - it would be great to automate some of this*

LIMNADES: Current Barriers

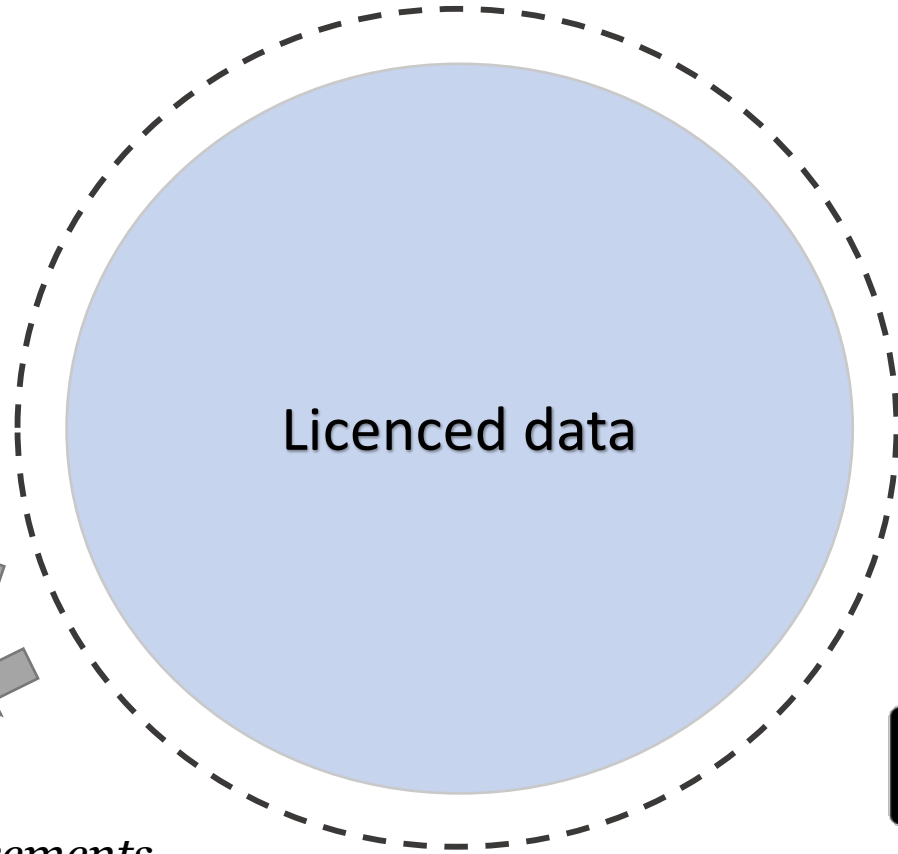

*120 downloads
10k measurements*

*75 requests
40k measurements
10% return rate*

Laboratory

Step forward...

- *Increase user engagement in the platform.*
 - *Data uploads (increase measurement diversity)*
 - *Encourage user - owner interaction*
- *Develop user experience (UI).*
- *Implement intelligent QC based on data.*
- *Adopt standardise OGC compliant software.*
